SIMILARITY).

SUBCELLULAR LOCATION: NUCLEAR (BY SIMILARITY).

TISSUE SPECIFICITY: OOCYTE.

TISSUE SPECIFICITY: OOCYTE.

DEVELOPMENTAL STAGE: ACCUMULATES IN PREVITELLOGENIC OOCYTES AND INTO EARLY EMBRYOGENESIS. DECLINES THROUGHOUT OOGENESIS AND INTO EARLY EMBRYOGENESIS. DECLINES THROUGH GASTRULA TO NEUBULA. NOT DETECTABLE BETWEEN NEURULA AND TAILBUD, NOR IN ADULT TISSUES OTHER THAN OVARY.

SIMILARITY: BELONGS TO THE HISTONE DEACETYLASE / ACUC / APHA FAMILY. HD SUBFAMILY 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             THE N-TERMINAL PART OF THE CORE HISTONES (H2A, H2B, H3 AND H4).
